Platform Health Meter

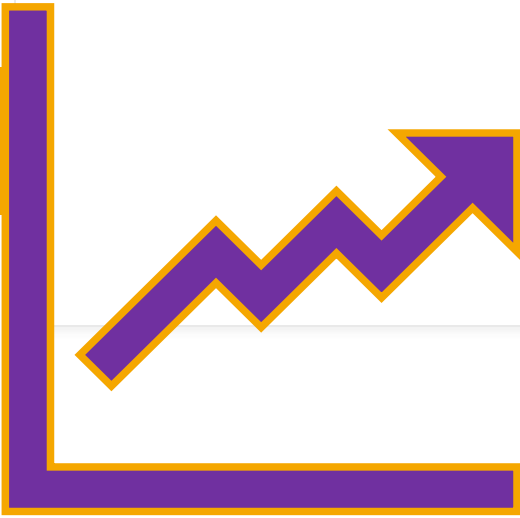

Audit and Analyse the Software applications for Health on Code Quality, Stability, Performance, Tech deprecation and Integration using the PHM framework to Gauge the Health of the Platform for scaling to digitized future.

Engagement Model

We believe in extended team working model as it gives the Customer an opportunity to start building a small engineering team for technology transformation and scale along with the transformation journey.

Why this model?

- Requirements keeps changing and not 100% complete when building a new solution to transform the business requirements.
- Establish an open culture between the teams so a trust is built between teams to give more confidence on the delivery of work artifacts.
- Productivity and Quality in the long term.
- Accountability and transparency the extended team can bring when compared to a pure staffing model.
- The extended team can bring accountability and transparency when compared to a pure staffing model.

Our work

Re platformed a North American E-commerce Auction Platform with emerging technologies and scaled the platform to increase the online auction sale by 30 %. Legacy platform was migrated from a J2EE stack to React Js, Node JS, Mongo DB, React Native technologies.
